

SHARPLES

Blanking Tools

Creative.
Intricate.
Exceptional.

Blankers are built press ready for all industry frames. All Sharples blankers are built to work with other tools throughout the sheet-fed process. Sharples designs all tooling with Bobst certified software and has the experience to provide customers with blanking tools for most layouts. We encourage our customers to take advantage of blanking technology to save on labor, we understand the cost of a complete tool can be high, that is why we have different component options that can help keep tooling costs under control.

- ◆ Blankers press ready with frames are designed for long-running items. Sharples can manufacture aluminum, steel, Light Blankers or BSI blankers using the best in laser, machining, welding, and bending technology. Steel blankers designed to stand the test of time. This is a solid solution made custom for you.
- ◆ Flat top Blankers: Steel or wood or a combination of the two. Double knife or made with an insert grid. Can be made with either Sharples frame, Bobst flat top, Light Frame or BSI's Angle Lock frame.
- ◆ Component Blankers: An economical solution that Sharples provides to customers who do not want the expense of dedicated tooling. Many options are available to suit your prepress setup. Sharples will work with you to find the best solutions that work for quick set up while saving on tooling cost.

Blankers made for
both BSI and Light Frames
